Excerpt: .The lines should be equidistant and about 1--16th or 16th mm. apart and every fifth line should be longer and heavier to facilitate counting. If the micrometer is ruled in squares (net-micrometer) it will be very convenient for many purposes. The ocular micrometer is placed in the ocular, no matter what the form of the ocular (i. e., whether positive or negative), at the level at which the real image is formed by the objective, and the image appears to be immediately upon or under the ocular micrometer and hence the number of spaces on the ocular micrometer required to measure the real image may be read off directly. This is measuring the size of the real image, however, and the actual size of the object can only be determined by determining the ratio between the size of the real image and the object. In other words it is necessary to get the valuation of the ocular micrometer in terms of a stage micrometer. 113. Valuation of the Ocular Micrometer.--This is the value of the divisions of the ocular micrometer for the purposes of micrometry, and is entirely relative, depending upon the magnification of the real image formed by the objective, consequently it changes with every change in the magnification of the real image and must be specially determined for every optical combination (i. e., objective and ocular) and for every change in the length of the tube of the microscope. That is, it...
